Non - functional require

→ **Scability** : (. concurrent user

Voctical Scaling → increasing the resourer
(256 GB to 1 TB).

horizontal Scaling → inc capacity of system

→ Two sys handling the
System

To avoid -

→ **Security** (dreach of security)

one person can't see other person history

Maintability branching are merging Spring
reach
NYSQL

functional requirement

what a system must do.

→ Create → login → Search → manage profile

→ user Authentication and Authorization

⇒ multi-platform support

⇒ Data management

⇒ Search

Story Points.

authentication is functional requirement

One function require → login

other " → follows.

Create every story points for every functional requirement
